(54) CN RATIO MEASUREMENT MEANS

(57)Abstract:

PURPOSE: To measure the C/N before demodulation from a reception signal even when there is no non-modulation part or even from a signal subjected to quasi-synchronization detection.

CONSTITUTION: An in-phase orthogonal component of a burst signal detected and phase-modulated by an orthogonal detector 3 is sampled and quantized by an A/D converter 4, a filter 5 is used to make waveform shaping and the signal is stored by one burst in a buffer memory 6. An XY-R2 converter 7 calculates square of the amplitude of the signals outputted from the buffer memory 6 and a selector 8 selects the value to which accumulator it is to be received. A noise power calculation section 10 uses plural accumulated sums outputted from an accumulation section 9 to obtain noise power of the reception signal and a C/N calculation section 11 estimates the C/N from the accumulation outputted from the accumulation section 9 and the noise power outputted from the noise power calculation section 10 and the estimated C/N by the C/N calculation section 11 is outputted from an output terminal 12.

LEGAL STATUS

[Date of request for examination]	25.09.1997
[Date of sending the examiner's decision of rejection]	05.06.2001
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]	
[Date of final disposal for application]	
[Patent number]	3237322
[Date of registration]	05.10.2001
[Number of appeal against examiner's decision of rejection]	2001-11658
[Date of requesting appeal against examiner's decision of rejection]	05.07.2001
